Teresa Romão

November 28, 2024

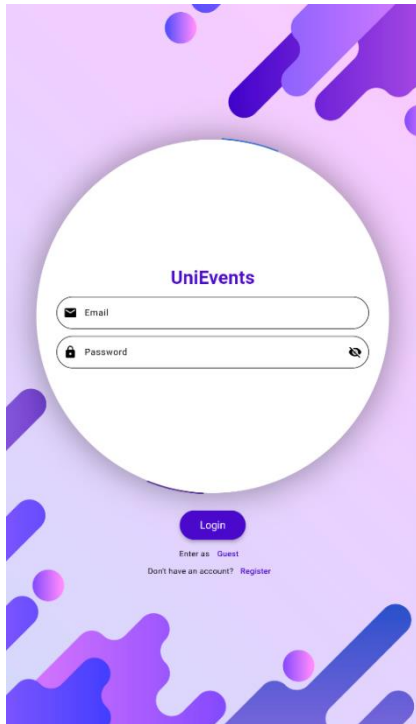

Introdução:

Todas os problemas apontados foram colocadas tendo em conta as funcionalidades ditas não implementadas por parte do Grupo 8 no relatório,

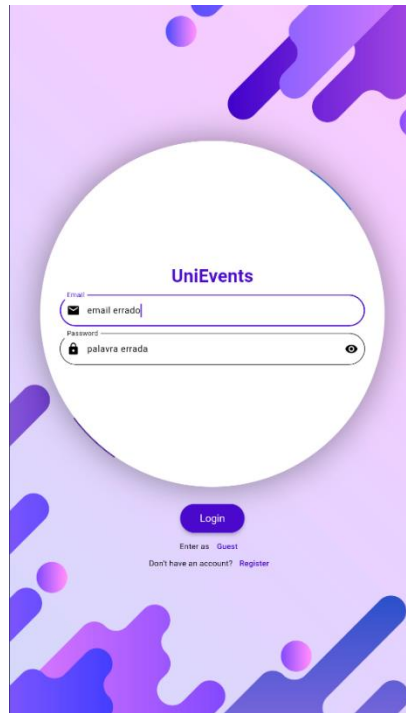

Nº	Problem	Heuristic	Description	Severity	Solution	Screenshot
1	The Guest and Register buttons are too small	Fitts' law (Tog's principle)	The register and guest buttons are too small and hard to press and see, the blend with the background, they are also too close together for their size, leading to missclicks	3	Make the buttons bigger and more visible	#1
2	There is no message error	Error reporting, diagnosis, and Recovery	Pressing the login button gives no feedback to the user saying that the credentials are wrong, it keeps the user guessing why is not logging in	3	Give the user feedback saying that either the email or the password is wrong	#2
3	The minute selector is very imprecise	Error prevention	Choosing the minute is very imprecise, if done quickly it will lead into error	2	switch to a vertical slider that goes through all the numbers	#3
4	The search bar is too small and blends with the rest of the app	Fitts' law	The search bar is too small and the color is too light, it blends with the rest of the app	2	Make the search bar bigger and give it a darker color, for example the purple used in the rest of the app	#4

5	No shortcut when searching for events, misleading functionality	Flexibility & Efficiency of use	When searching for events it's not possible to click navigate from the results to the event page by just pressing the desired event. It misleads the user to think that it is possible when nothing actually happens	4	When pressing on an event from the results given by our search query it should open the event where we clicked	#5
6	The images of events are too big	Aesthetics (Tog's principle)	It's hard to see the event's information because the font is too small, especially compared to the image that takes almost all the space on the screen leaving no room for the event's information	1	Make the image smaller and the fonts bigger	#6
7	Fonts are too small	Aesthetics (Tog's principle) & Fitts' law	The fonts are small it makes it hard to see the information on the profile, the button to logout is too small, everything blends too much with the background, there is too much empty space that could be better used	1	Use the empty space on the screen more efficiently making the information and the logout button more visible	#7
8	No search bar for friends	Flexibility & Efficiency of use	The share page with your friends doesn't allow searching for friends, requiring endless scroll to find a specific friend	3	Use a search bar to search for friends	#8
